Program Description:

PTI, Inc. is pleased to offer this comprehensive training program for the fifth time. This is a pragmatic program that will be presented in a modular format and will deal with various aspects of those unit operations that are intended to produce pharmaceutical tablets. The modular format will allow participants to focus attention on key activities in which they are interested, as well as provide a broad overview of the key technical aspects associated with tablet development.

Who Should Attend?

This is not intended to be an introductory program for individuals generally unfamiliar with the design and development of oral solid dosage forms. The program will thus be of greatest value to scientists that are currently involved with tablet formulation and process development, and who wish to gain a greater understanding of the key issues that are critical to the preparation of robust tablet dosage forms. Please bear in mind that one of the important features of this training program is that we intend to have a very fruitful, comprehensive, and interactive sessions in which, all participants will have ample opportunity to seek answers for the questions that they might have about the modular sessions of the day. In order to maximize the quality and utilizations of these sessions, we encourage every attendee to provide us in well advance with the questions that they seek answers about the sessions that they will attend. We will then pass these questions to the speakers prior to the event.

Important Note:

Please note that there may be an inevitable change in the program (such as replacement of a speaker) due to any reason. In such a situation, we will spend every effort to keep the high standard of this program; however PTI Inc will not be hold liable for any consequences of such a matter. Please visit www.pti-int.com for updated information.
